180MW solar energy storage power station

Overview

Could a 180 MW solar farm be combined with a battery energy storage system?

Located between Stockton and Darlington in the North East of England, the 180 MW (AC)(1) solar farm, subject to a successful financial investment decision being taken, would be combined with a 180 MW (AC) battery energy storage system.

How do energy storage plants augment electrical grids?

Many individual energy storage plants augment electrical grids by capturing excess electrical energy during periods of low demand and storing it in other forms until needed on an electrical grid. The energy is later converted back to its electrical form and returned to the grid as needed.

Can a solar farm power a 70,000 home in the UK?

The development project, once fully operational, would be capable of generating solar power equal to the needs of 70,000 typical UK homes. RWE, the UK's leading power generator, has received confirmation of planning permission for its Byers Gill Solar Farm located near Stockton and Darlington in the UK.
