Overview

Why do inverter monitors display a fault code?

During the inverter application process, the possibility of the inverter monitor displaying the inverter fault code is inevitable. Knowing the inverter fault code helps users stay calm when facing situations where a fault may occur and then deal with it appropriately, avoiding inverter failure.

What are inverter error codes?

Inverter error codes are often the first clue that something is wrong with your solar, backup, or industrial power system. These codes serve as the inverter's way of "talking" to you, warning you of system errors, irregularities, or malfunctions that need attention. The sounding of the inverter alarm accompanies their appearance.

How do I Reset my solar inverter?

This method starts by turning off the DC input from the solar panels or battery and then the AC output. Wait 2-5 minutes, then turn the DC input back on and the AC output. For the smart inverter, you can first log in to the inverter's monitoring app. Choose the menu that provides "Clear Fault" or "Reset System."

Why do I get an E01 error code?

The E01 error code appears when the controller is sensing an over-discharged battery bank. This can happen for one of two reasons. The first is very straightforward. The battery bank is actually over-discharged. If the battery voltage (12V system) is below 11.1V it will trigger the E01 code.

How do I know if my inverter has a fault?

Most modern inverters, such as those from Joeyoung, feature a digital display or LCD screen and can be monitored via a mobile app. When a fault occurs, the display on the inverter will show a numerical or alphanumeric code. In

power inverters, faults are also signaled by the alarm ringing on the inverter.

Why do inverter fault codes need to be reset?

Hardware replacement, such as an inverter capacitor, MOSFET inverter, or inverter IGBT, is needed. There is a noticeable drop in performance. Resetting inverter fault codes is not just about removing the error; it's about solving the problem behind it.
