5g base station communication energy storage ESS frequency

Overview

Does a 5G base station promote frequency stability?

The proportion of traditional frequency regulation units decreases as renewable energy increases, posing new challenges to the frequency stability of the power system. The energy storage of base station has the potential to promote frequency stability as the construction of the 5G base station accelerates.

Can auxiliary frequency regulation reduce frequency deviation of 5G base station?

Therefore, the strategy proposed in this paper can reduce frequency deviation of power system and auxiliary frequency regulation to maintain stable operation of power system. Taking the energy storage of 5G base station as the flexible FR resources, the control strategy of energy storage of 5G base station participating in FR is proposed.

What is a 5G base station energy storage device?

During main power failures, the energy storage device provides emergency power for the communication equipment. A set of 5G base station main communication equipment is generally composed of a baseband BBU unit and multiple RF AAU units. Equation 1 serves as the base station load model:.

How much power does a 5G base station use?

The base station can be independently powered by the internal energy storage in a short period, making the 5G base station have flexibility of power utilization and the ability of FR. 5G base station, as a new type of flexible FR resource, consumes approximately 2.3 kW in the none-load state and 4 kW in the full-load state.

Can BSES co-regulation be used for voltage regulation in 5G base stations?

Furthermore, with the goal of fully utilizing the energy storage resources of 5G

base stations, a BSES co-regulation method for voltage regulation in DNs is proposed. The feasibility of the proposed method is verified by case analysis, and the following conclusions can be drawn.

What is 5G base station load forecasting technology?

The research on 5G base station load forecasting technology can provide base station operators with a reasonable arrangement of energy supply guidance, and realize the energy saving and emission reduction of 5G base stations.
