# 5g base station communication range

## Overview

---

What are the different types of 5G NR base stations?

This article describes the different classes or types of 5G NR Base Stations (BS), including BS Type 1-C, BS Type 1-H, BS Type 1-O, and BS Type 2-O. 5G NR (New Radio) is the latest wireless cellular standard, succeeding LTE/LTE-A. It adheres to 3GPP specifications from Release 15 onwards. In 5G NR, the Base Station (BS) is referred to as a gNB.

What is a 5G base station?

Here's a detailed explanation of the 5G base station and its key characteristics: 1. Radio Access Network (RAN) Component: Interface with user Devices: The 5G Base Station Interfaces Directly with User Devices, Such as Smartphones, Tablets, and Internet of Things (IoT) Devices, Providing the necessary Radio Connectivity for Communication.

What is 5G NR BS?

5G NR (New Radio) is the latest wireless cellular standard, succeeding LTE/LTE-A. It adheres to 3GPP specifications from Release 15 onwards. In 5G NR, the Base Station (BS) is referred to as a gNB. These 5G NR BS operate in two frequency ranges: FR1 and FR2. (./assets/5G-NR-BS-Channel-Bandwidths.jpg). Table 1: Frequency Ranges.

What are the 3GPP specifications for 5G NR base stations?

The 3GPP specifications define several classes of 5G NR base stations: Frequency Range: Operates in FR1. Requirements: Conducted requirements at individual antenna connectors. Use Case: Suitable for macro and small cell deployments where the focus is on conducted measurements. Frequency Range: Operates in FR1.

Are 5G base stations 3GPP compatible?

In conjunction with 5G NR, private base stations (BS) can support connectivity

for different spectrum bands (sub-GHz, 1 to 6 GHz, or mmWave). The 5G base station products must pass all of the test requirements prior to their release. Otherwise, the products are not 3GPP-compatible or appropriate to implement in a network.

What frequency bands do 5G base stations use?

Utilization of Frequency Spectrum: 5g Base Stations Operate in specific Frequency Bands Allocated for 5G Communication. These bands include Sub-6 GHz Frequencies for Broader Coverage and Millimeter-Wave (Mmwave) Frequencies for Higher Data Rates.
