Albania frequency modulation energy storage power station project

Overview

With construction crews breaking ground last month, this 300MW/1200MWh facility isn't just another battery project – it's shaping up to be the region's first grid-scale storage solution using cutting-edge lithium iron phosphate (LFP) technology [1]. Can MATLAB/Simulink verify a thermal power unit primary frequency modulation model?

Model verification A previous article based on theoretical research built a hybrid energy storage system-assisted thermal power unit primary frequency modulation model in MATLAB/Simulink. The rated power of the thermal power unit is 600 MW, and the relevant parameters are per unit value .

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit $|\Delta f_m|$ is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation $|\Delta f_m|$ is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

Which control scheme is adopted in hybrid energy storage combined thermal power units?

In summary, control scheme D is adopted when hybrid energy storage combined thermal power units are configured to participate in frequency modulation, namely, both flywheel energy storage and lithium battery energy storage adopt an adaptive variable coefficient control strategy to achieve the best effect.

How does a hybrid energy storage system affect frequency regulation?

In practice, the frequency fluctuation of a unit is generally caused by continuous and irregular load fluctuations, therefore, simulate the impact of coupling a hybrid energy storage system and a single energy storage system on the primary frequency regulation of thermal power units under continuous disturbances.

What is the time scale of frequency modulation?

In the frequency modulation process of power system, the time scale of a frequency modulation adjustment is second level and below, the frequency fluctuation of the period below 10 s is mainly suppressed by the governor and the inertia of the system, and the time constant of the filter should be <10 s.
