# Algeria Hybrid Energy and Mobile Collaboration to Build 5G Base Stations

## Overview

---

What is a distributed collaborative optimization approach for 5G base stations?

In this paper, a distributed collaborative optimization approach is proposed for power distribution and communication networks with 5G base stations. Firstly, the model of 5G base stations considering communication load demand migration and energy storage dynamic backup is established.

What is a 5G base station?

At the same time, a large number of 5G base stations (BSs) are connected to distribution networks, which usually involve high power consumption and are equipped with backup energy storage, giving it significant demand response potential.

What is a collaborative optimal operation model of 5G base stations?

Afterward, a collaborative optimal operation model of power distribution and communication networks is designed to fully explore the operation flexibility of 5G base stations, and then an improved distributed algorithm based on the ADMM is developed to achieve the collaborative optimization equilibrium.

What is a photovoltaic-diesel hybrid system for mobile phone base station?

This work concerns the techno-economic study of photovoltaic-diesel hybrid system for mobile phone base station located in Oum el Bouaghi city (in southern Algeria). This system is made up mainly of a photovoltaic panel, a diesel generator, power converter and lead-acid battery.

Can Algeria become a global hub for hydrogen development?

One of the most ambitious elements of Algeria's diversification strategy is its goal to become a global hub for hydrogen development. With aims to meet 10% of Europe's green hydrogen demand by 2040, Algeria is developing the SoutH2 Corridor, a 3,300-km hydrogen pipeline connecting North Africa to

Italy, Germany and Austria.

What is a 5G BS Model?

A 5G BS model considering communication load migration and energy storage dynamic backup is established. A coordinated optimization model of the interacted distribution and 5G communication networks is proposed. An improved ADMM-based distributed algorithm is designed for the coordinated optimal operation of two networks.
