

## **A-Core Container**

# **Angola Base Station Room Energy Management System**

## Overview

---

How is energy used in Angola?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is a building energy management system (BEMS)?

BEMS (Building Energy Management System) is a method of monitoring and controlling a building's energy needs. It usually incorporates the management of heating, ventilation and cooling (HVAC), lighting, security measures and, increasingly, EV charging needs.

What is a rule-based energy management system?

A rule-based energy management system focuses on designing and implementing the logic governing energy distribution among connected DERS. It relies on established rules and predefined guidelines to make real-time decisions about energy allocation.

What are energy management systems?

The primary goals are reducing energy bills (by peak shaving), providing backup power, and ensuring swift adjustments to changing load requirements. Energy Management Systems provide the backbone for modern energy storage solutions, uniting hardware and software components into a cohesive whole.
