Battery BMS customized development

Overview

What is battery management system (BMS)?

Battery Management System (BMS) is the brain of lithium-ion batteries. At CM Batteries, our CTO Wang has over 20 years of experience in battery management system design, specializing in BMS hardware and software with minimal energy loss and stable quality.

How do I create a custom battery management system?

Our process for creating custom battery management systems begins by developing BMS modules and custom BMS boards that manage your project's voltage, current, temperature, and data communication with total accuracy.

How do I design a custom BMS for Li-ion batteries?

Designing a custom BMS for Li-ion batteries requires careful consideration of safety, performance, cost, and regulatory requirements. Success depends on thorough understanding of battery chemistry, robust circuit design, comprehensive testing, and adherence to industry best practices.

What is a custom BMS?

Custom BMS, designed with an in-depth understanding of the unique and often complex conditions of a specific project, is typically developed to address these specific needs. As a rule, these projects require the expertise to develop battery management software tailored to their unique requirements. This approach is ideal when: Unique Requirements.

Why is software development important for battery management systems?

Software development for battery management systems also includes a data acquisition and analysis system where information on the battery's performance and usage can be viewed and analyzed. The battery data proves useful for manufacturers to correct the battery design and enhance efficiency.

What is CMB's battery management system design?

CMB's battery management system design includes cell voltage tracking, cell balancing, and health status readings for battery packs by App and computer.
