# Can different outdoor power supplies be mixed

## Overview

---

Compatible with different voltage-rated PSUs – As long as all power supplies have the same current rating, they can be mixed. Requires similar power supplies – All units should have identical voltage and current ratings for optimal performance.

Or power cable from PSU to socket?

Modular cables are not interchangeable between models. PSU power cable (to power socket) - those are universal. All are the same (in the same region). No, the advice is to never do that. Not all cables are made the same. Ideally you should only use the ones from.

DO NOT mix and match the cables of different modular power supplies without prior research. They may fit physically but they are often wired differently, which you will not be able to see since the cables are often wrapped or braided. The power plugs that go into your mainboard, SATA or Molex.

In short – Yes, you can connect two power supplies together, but it's not as simple as it sounds. Tapping into twice the power requires precision, the right tools, and a keen understanding of how power supplies work. If mishandled, two power sources can create a world of electronic havoc. In this.

When you need to connect multiple power supplies together to reach your desired power output, you'll have two approaches you can take: connecting power supplies in parallel or connecting power supplies in series. Each method has its pros and cons, which is why we're going to break down the nuances.

I need to use a Raspberry Pi in a project. I use a 5 V power supply for it (now a 2 A phone charger), and it will control a "power board" with some MOSFETs, etc. running at 12-24 V. The power board is connected to an external 12-24 V

switching power supply. Can/should I connect the two power.

In this video, we explore a common question: Can you safely combine power supplies to increase voltage or current?

We'll demonstrate this using two Siglent SPD1305X power supplies and compare them to the built-in functionality of a multi-channel power supply, the Siglent SPD3. more In this video.
