China s communication base station power supply planning scheme

Overview

Can solar power improve China's base station infrastructure?

Traditionally powered by coal-dominated grid electricity, these stations contribute significantly to operational costs and air pollution. This study offers a comprehensive roadmap for low-carbon upgrades to China's base station infrastructure by integrating solar power, energy storage, and intelligent operation strategies.

Do communication base station operations increase electricity consumption in China?

Comparing data from 2021, 2025, and 2030, we found that the electricity consumption due to communication base station operations in China increased annually.

Will China Telecom upgrade base stations in 2024?

In Anhui Province, for example, the China Telecom branch plans to upgrade 700 base stations with low-carbon retrofits in 2024 and selectively implement an active deep sleep system for base stations across the province at night to reduce the cost of purchased power.

Can China's communications industry reduce reliance on grid-powered systems?

While focused on China, the model and findings can serve as a blueprint for countries worldwide facing similar energy and infrastructure challenges in the age of digital expansion. It is important for China's communications industry to reduce its reliance on grid-powered systems to lower base station energy costs and meet national carbon targets.

Should China upgrade its communication systems?

Our analysis indicates that the low-carbon upgrade of China's communication systems is a critical strategy for alleviating both cost pressures and carbon

policy constraints. The upgrade also delivers additional environmental and public health benefits.

Can a base station power system model be improved?

An improved base station power system model is proposed in this paper, which takes into consideration the behavior of converters. And through this, a multi-faceted assessment criterion that considers both economic and ecological factors is established.
