Communication base station lithium battery specifications

Overview

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

What is a wide temperature range LiFePO₄ battery?

This translates to lower replacement frequency and maintenance costs. Wide Temperature Range LiFePO₄ batteries operate reliably in temperatures ranging from -20°C to 60°C, making them suitable for the diverse and often extreme environments of telecom base stations.

What makes a good battery management system?

A well-designed BMS should include: Voltage Monitoring: Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging. Temperature Management: Built-in temperature sensors to monitor the battery pack's temperature, preventing overheating or operation in extreme cold.
