# Cost of Home Energy Storage Systems

## Overview

---

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

What is a home energy storage system?

A home energy storage system consists of inverters, battery groups, and other energy storage components to create an uninterruptible power supply system for household consumers. This system combines renewable energy and implements load shifting to improve energy quality and bring economic benefits while reducing your electricity bills.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering, procurement, and construction (EPC) costs can be estimated using the footprint or total volume and weight of the battery energy storage system (BESS). For this report, volume was used as a proxy for these metrics.

What are the benefits of a residential storage system?

Residential storage: Primarily used for home resiliency to deliver back-up power, these systems can also shift energy consumption to off-peak hours and integrate home solar for a low-cost clean energy supply. Residential storage systems can be eligible for Inflation Reduction Act tax credits.

How much does a storage system cost?

In general, for a 6-hour storage time, the estimated ICC of a high-head (700+ ft), large-capacity (500+ MW) project is \$2,200 to \$2,500/kW. For a project with similar head and installed capacity, the estimated ICC increases to

\$2,400 to \$2,800/kW for an 8-hour storage time and \$2,600 to \$3,100/kW for a 10-hour storage time. Figure 4.3.

What is the value of energy storage technologies?

The value of energy storage technologies lies in the services that they provide at different locations in the energy system, including heat to heat, electricity to electricity, electricity to heat, and heat to electricity applications. This roadmap therefore includes discussion of storage technologies in the context of these applications.
