Customized energy storage cabinets on the grid side of Liberia

Overview

How can Liberia expand energy access?

These resources hold immense potential, with Liberia boasting abundant solar irradiation and promising bioenergy in specific regions. Efforts to expand energy access also hinge on vital factors such as international partnerships, public-private collaborations, and innovative off-grid and mini-grid solutions.

Do Liberians need a grid electricity system?

Only 3 % of Liberians had grid electricity access in 2019, among the lowest globally. Traditional biomass use poses indoor air pollution risks, especially for women and children. Outdated infrastructure, fuel dependence, and funding constraints hinder progress. Abundant renewables, international support, and off-grid options offer solutions.

How can Liberia reduce its dependency on imported fuels?

To overcome these challenges, Liberia has been exploring alternative solutions to reduce its dependency on imported fuels for thermal power generation. One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation.

How does Liberia use petroleum products?

Petroleum products, including gasoline and diesel, contribute a significant to Liberia's energy consumption. These fuels are primarily used in transportation, power generation from small diesel and gasoline generators and industrial applications. Liberia is a net importer of petroleum products, relying on imports to meet its energy needs.

What are the challenges to energy access in Liberia?

The primary challenge to energy access in Liberia is the limited and underdeveloped energy infrastructure. The lack of adequate power

generation, transmission, and distribution systems contributes to this low access rate. The electrification rate is significantly lower in rural areas, where most of the population resides .

Will Liberia get a 20 MW power supply in 2020?

In addition, the government signed a Power Purchase Agreement with a solar energy company to provide the country ≥ 20 MW of electricity in 2020 . Despite these efforts, much work remains to be done to improve access to reliable and affordable energy in Liberia.
