Danish solar panels

Overview

Solar power provided 1.4 TWh, or the equivalent of 4.3% or 3.6% of Danish electricity consumption in 2021. In 2018, the number was 2.8 percent. Denmark has lower solar insolation than many countries closer to Equator, but lower temperatures increase production. Modern solar cells decrease production by 0.25% per year. 2020

Transparent solar panels that deliver 12.3% efficiency are being developed in a collaborative project between scientists under the EU's CitySolar project. They have been working tirelessly on this project, which has already resulted in record-breaking statistics. These see-through cells are windows.
