Djibouti Liquid Cooling Energy Storage Management Company

Overview

What is a liquid cooling thermal management system?

The liquid cooling thermal management system for the energy storage cabin includes liquid cooling units, liquid cooling pipes, and coolant. The unit achieves cooling or heating of the coolant through thermal exchange. The coolant transports heat via thermal exchange with the cooling plates and the liquid cooling units.

Where is the liquid cooling unit located?

The liquid cooling unit, firefighting system, confluence chamber, and power distribution room are located at one end of the cabin, with the liquid cooling unit taking up the majority of the space. The liquid cooling piping runs along the bottom of the cabin, while the firefighting piping and wiring are laid out at the top.

Why is liquid cooled technology important?

ated liquid-cooled technology to support larger batteries. This rapid change and high growth rate has introduced new risks across the supply chain, such as manufacturing defects and complex subsystems with additional points of failure, which can lead to uncontrolled thermal runaway (a
