Does outdoor power supply use a lot in South America

Overview

Many countries with a voltage around 120 V use 10 A for regular usage and 15 or 16 A for high-power applications (heaters, motors). Appliances may include batteries and/or supercapacitors to compensate for the lack of outlets above 10 A, or to further increase the usable power beyond the maximum output of 15 or 16 A outlets (if such are available). Due to the high cost of those appliances, applications that require high power at low cost are much less common in 120 V co.

Many Latin-American, African and Asian countries, however, use a motley collection of - often incompatible - plugs and sometimes also the voltage differs from region to region.

Many Latin-American, African and Asian countries, however, use a motley collection of - often incompatible - plugs and sometimes also the voltage differs from region to region.
