Double-glass bifacial module factory

Overview

Why do bifacial modules need double-glass encapsulant?

There are also the associated costs of the double-glass design and extra mounting support required for the heavier modules. Almost every bifacial module manufacturer has begun opting for polyolefins (POE) encapsulant instead of the traditional EVA. This is to maintain the enhanced reliability of the double-glass design.

What is a bifacial module?

In bifacial modules, the rear side cover consists of either glass or a transparent polymer back sheet. When backsheets are used, the module must be supported by an aluminium frame but the rigidity of the glass-glass modules is enough that in some cases a frame is not needed and the edges are only sealed.

What is a Longi 620w bifacial double glass solar panel?

Loading. The Longi 620W Bifacial Double Glass Solar Panel is a high-performance photovoltaic module designed for utility-scale, commercial, and industrial solar installations.
