East Africa Outdoor Power Supply Production

Overview

Should East African countries expand their manufacturing sectors?

Furthermore, the ambition of East African nations to expand their manufacturing sectors presents a stimulating opportunity to accelerate the integration of decentralized renewable energy technologies into the sector. 1. Introduction Countries in East Africa (EA) are experiencing higher economic growth compared to the African average .

How reliable is Africa's electricity supply?

Electricity supply reliability remains a huge challenge for countries across Africa. Power rationing, outages, and grid collapses are huge fixtures for many markets. According to a 2022 survey by Afrobarometer, only 43% of Africans reported a reliable electricity supply, with significant variation across countries.

How can Africa make a significant impact on renewables energy manufacturing?

Significant impact in renewables energy manufacturing in Africa could be achieved through four programs. Africa has many of the right ingredients to build a globally-competitive renewable energy ecosystem—it has the demand, the natural resources, the trade partnerships, and many supporting tools and incentives.

How will Africa's energy demand change over the next decade?

Africa's demand for power is projected to surge over the coming decades, more than 2x by 2030 and 8x by 2050¹. This growth will be driven primarily by industrialization as African countries push to electrify and grow their economies while decarbonizing in line with the global energy transition.

What is Africa's energy potential?

Africa has huge renewable energy generation potential. According to the

Global Solar Atlas, the continent's average solar energy potential is 4.51 kWh/kWp/day, the highest of any region globally. Also, about 90% of the continent's hydropower potential remains unexploited— the largest proportion of untapped capacity globally.

How many people in Africa have electricity access?

Currently, around 60 million people in Africa have electricity access through off-grid solutions, with 15 countries having electrification plans incorporating distributed renewables¹¹. Energy access would promote agricultural productivity, modern health services and education, and industrial development.
