Energy Emergency Communication Command Base Station

Overview

With the development of 5G technology, a convenient and fast emergency communication solution is needed when the local ground base station is unavailable for disaster. This paper put forward.

What is the current emergency communication command?

The current emergency communication command mainly relies on communication infrastructure and is supplemented by emergency communication vehicles as well as the use of satellite networks, shortwave networks and trunking communication networks to provide the same communication services.

What is integrated space-air-ground emergency communication command?

The integrated space-air-ground emergency communication command is designed to use advanced satellite communication technology, aerial unmanned platform communication technology, ground-based self-assembling network technology and public network technology, etc.

What is space-air-ground Emergency Rescue Command?

Subsequently, a space-air-ground emergency rescue command theoretical system is introduced by combining broadband emergency communication, accurate acquisition of real-time disaster information, disaster situation and scenario projection, emergency communication command services, and resilient emergency rescue command.

What are the different types of emergency command theories?

Emergency command theories include group decision, collaborative decision, self-synchronization, etc. In terms of intelligence decision, there are many methods such as trend analysis, expectation analysis and group analysis.

Why are conventional communication facilities unable to respond to emergencies?

Damage to electrical installations, disruptions to public networks and damage

to roads also make conventional communication facilities unable to meet the demanding needs of emergency response.

Can Digital Command operations be used for rescue command?

When it comes to digital command operations for rescue command, the National Engineering Laboratory for Integrated Command and Dispatch Technology and the National Emergency Mapping Center have begun to promote the intelligence of traditional command and dispatch elements and means.
