## Overview

---

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What is the battery energy storage roadmap?

This Battery Energy Storage Roadmap revises the gaps to reflect evolving technological, regulatory, market, and societal considerations that introduce new or expanded challenges that must be addressed to accelerate deployment of safe, reliable, affordable, and clean energy storage to meet capacity targets by 2030.

Are battery energy storage systems safe?

Battery energy storage systems (BESS) are growing rapidly on the U.S. grid, but the technology has faced some headwinds. The primary technology being installed, lithium-ion storage facilities, have experienced fires that have some localities beginning to question the safety of living nearby.

Why do we need a battery energy-storage technology (best)?

BESTs are increasingly deployed, so critical challenges with respect to safety, cost, lifetime, end-of-life management and temperature adaptability need to be addressed. The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs).

Are battery energy-storage technologies necessary for grid-scale energy storage?

The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs). BESTs based on lithium-ion batteries are

being developed and deployed. However, this technology alone does not meet all the requirements for grid-scale energy storage.

What are energy storage systems?

Energy-storage systems designed to store and release energy over extended periods, typically more than ten hours, to balance supply and demand in power systems. Reduction of energy demand during peak times; battery energy-storage systems can be used to provide energy during peak demand periods.
