Energy Storage Project EPC

Overview

What is an EPC project?

EPC projects that are also known as 'turnkey' and as the contractor assumes responsibility for engineering services, procurement of materials, hiring of teams and materials, and execution of the work, among other tasks, to deliver the project ready to be operated by the client by a given deadline and with a number of guarantees.

What services does EPC energy offer?

With over 650 MWh installed and commissioned, our experienced team can provide in-house design and engineering services, along with end-to-end support including commissioning, operations & maintenance, plus extended warranties. We make energy efficiently. Copyright © 2024. EPC Energy, Inc. CSLB #1086692.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

What is an EPCF project?

EPCF projects are those in which the client entrusts Symtech Solar and its Partners as contractors with the complete execution of the work, from engineering design, procurement, construction, testing and commissioning and even the finance.

What are the operational limitations of energy storage?

Operating Limitations: Energy storage resources may be subject to operational constraints that do not affect traditional generation projects. For

example, certain battery technologies will degrade more quickly if the state of charge is not actively managed within a certain range.

Why is energy storage important?

Like transmission, energy storage can help to manage supply and demand over broad areas of the electric system because it can provide both generation and load by converting excess electric power into another medium to be stored for later use.
