Generation with energy storage

Overview

What is an energy storage system?

An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to supply (generate) electricity when needed at desired levels and quality. ESSs provide a variety of services to support electric power grids.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

What are energy storage technologies?

Energy storage technologies convert surplus renewable energy into forms that can be stored and later converted back to electricity as needed. Key types include: Pumped Hydroelectric Storage: Excess electricity is used to pump water to an elevated reservoir.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

Why is energy storage important?

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers.

Energy storage is essential to a resilient grid and clean energy system.

Are renewables the future of energy storage?

Ultimately, the future of renewables is inseparable from the future of energy storage. Together, they form the backbone of a sustainable, low-carbon energy future that can power economies, protect the environment, and deliver reliable energy for all.
