What is the future of energy storage in South Africa?

This is according to a new report by the World Bank which says that over the next five years SA is expected to show rapid growth in energy storage demand. The rise in demand will come from the transformation of the energy system to include more renewables and developing demand in the electric vehicle (EV) sector.

Why is BTM energy Storage important in Africa?

BTM energy storage is becoming increasingly important in the African market as grid instability and falling cell prices pushes consumers towards installing storage. In South Africa, Eskom, the country's main electricity utility, registered 69 days of load shedding in 2024, leading to widespread power shortages.

What is the average size of storage projects in Africa?

The average size of these projects sits at ~0.26GWh, a large increase from the projects currently operational. This largely reflects the direction in which the storage market is moving more generally, with larger cell sizes allowing system sizes to increase. Have you read?
