# How big of an inverter do I need for 178kw

## Overview

---

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How big should a solar inverter be?

To account for power losses assume an 80 percent efficiency. Your solar inverter should have a similar or slightly higher wattage rating than the DC output of your solar panels (which in this case is 4.5 kW). You can size it between 1.15 and 1.5 times larger. The rule of thumb is to size your inverter 1.25 bigger than your solar array.

How to calculate inverter size?

Using the Inverter Size Calculator is quick and easy. You'll need three inputs: Total Wattage (W): This is the total power consumption of all the appliances or devices you plan to run through the inverter. Safety Factor: A multiplier to ensure some buffer above your actual power requirement. Typically ranges from 1.1 to 1.5.

How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.

How much power does an inverter need?

The continuous power requirement is actually 2250 but when sizing an inverter, you have to plan for the start up so the inverter can handle it. Third, you need to decide how long you want to run 2250 watts. Let's say you would

like to power these items for an eight-hour period.

Should your inverter size match your home's energy usage?

Think of inverter sizing like choosing the right-sized engine for your car. Too small, and you'll struggle on hills. Too large, and you're paying for power you'll never use. The sweet spot maximizes both performance and value. It's a common misconception that inverter size should match your home's energy usage.
