How big should I buy an outdoor inverter

Overview

What size inverter do I Need?

The size of the inverter you need depends on the total wattage requirements of the devices or appliances you want to power. To determine the appropriate size, you can calculate the combined wattages of the items you plan to run using the inverter.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

Should your inverter size match your solar panel size?

Match your inverter to your lifestyle, not just your roof. If you're running a fridge, home office, and PS5 all day, size accordingly. If you're barely home, go leaner. Here's the cheat code: your inverter size should usually match your solar panel system's size in kilowatts.

Should your inverter size match your home's energy usage?

Think of inverter sizing like choosing the right-sized engine for your car. Too small, and you'll struggle on hills. Too large, and you're paying for power you'll never use. The sweet spot maximizes both performance and value. It's a common misconception that inverter size should match your home's energy usage.

Which Inverter should I buy?

Pro Tip: For home systems and RVs, always go with a pure sine inverter to protect your investment. Combine your findings: Highest Surge: e.g., 600 W from fridge. → Recommended Inverter Size: 1,200 W minimum.

Can a solar inverter be too big?

Oversizing or having an inverter that is too big for your solar panels will not produce enough electricity. Undersizing or having an inverter that's too small will convert a limited amount of energy. You can avoid both of these scenarios by following these three basic steps to solar inverter sizing.
