# How is the construction of wind and solar complementary 5G communication base stations in Montenegro progressing

## Overview

---

What is a distributed collaborative optimization approach for 5G base stations?

In this paper, a distributed collaborative optimization approach is proposed for power distribution and communication networks with 5G base stations. Firstly, the model of 5G base stations considering communication load demand migration and energy storage dynamic backup is established.

What is a collaborative optimal operation model of 5G base stations?

Afterward, a collaborative optimal operation model of power distribution and communication networks is designed to fully explore the operation flexibility of 5G base stations, and then an improved distributed algorithm based on the ADMM is developed to achieve the collaborative optimization equilibrium.

Will the 5G mobile communication infrastructure contribute to the smart grid?

In the future, it can be envisioned that the ubiquitously deployed base stations of the 5G wireless mobile communication infrastructure will actively participate in the context of the smart grid as a new type of power demand that can be supplied by the use of distributed renewable generation.

What is a 5G base station?

At the same time, a large number of 5G base stations (BSs) are connected to distribution networks, which usually involve high power consumption and are equipped with backup energy storage, giving it significant demand response potential.

Can a 5G base station enter a hibernation state?

If the communication load can only connect to one 5G BS, the base station cannot enter a hibernation state by load migration. In addition, the capacity of 5G BS to carry the communication load has an upper limit, dependent on the transmission traffic constraints and transmission power constraints, as shown

in Equations (10), (11).

Do 5G BSS have a flexible operation model?

**Conclusions** In this paper, an operation model of 5G BSs considering its communication load migration and energy storage dynamic backup is first presented, and then a coordinated optimization model of distribution and 5G communication networks is established to fully explore the operation flexibility of 5G BSs.
