How many watts does a rooftop solar panel use

Overview

Most residential panels in 2025 are rated 250–550 watts, with 400-watt models becoming the new standard. A 400-watt panel can generate roughly 1.6–2.5 kWh of energy per day, depending on local sunlight. To cover the average U.S. household's 900 kWh/month consumption, you typically need 12–18 panels.
