A 90A battery is rated to provide 90 amps for one hour or a proportionate amount over different durations. To better appreciate the energy it houses, consider its transformation into watt-hours (Wh), which accounts for both voltage and current.

This means the battery can store 1.2 kilowatt-hours of energy. Example: The battery can deliver 1.2 kWh of energy before being discharged. This calculation is vital for assessing how long your battery will last under certain conditions, whether you're powering a device or running an entire system.
