How much electricity does China s 5G base stations use

Overview

Are 5G base stations causing more energy consumption?

However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption. The carrier is seeking subsidies from the Chinese government to help with the increased energy usage.

Does China Mobile have a 5G base station?

China Mobile has tried using lower cost deployments of MIMO antennas, specifically 32T32R and sometimes 8T8R rather than 64T64R, according to MTN. However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption.

How much power does a 5G base station consume?

That's almost a threefold increase compared to 4G (5). One 5G base station is estimated to consume about as much power as 73 households (6), and 3x as much as the previous generation of base stations (5), (7).

Will China's 5G power consumption Skyrocket by 2035?

Power consumption from 5G in China is on track to skyrocket 488% by 2035, reaching 297 billion kWh by 2035, roughly equivalent to Sichuan's total electricity consumption in 2020. To date, only two major data center operators in China, Chindata and AtHub, have committed to achieve 100% renewable energy by 2030.

How will 5G affect the energy consumption of mobile operators?

Edge compute facilities needed to support local processing and new internet of things (IoT) services will also add to overall network power usage. Exact estimates differ by source, but MTN says the industry consensus is that 5G will double to triple energy consumption for mobile operators, once networks scale.

Will 5G double to Triple energy consumption?

Exact estimates differ by source, but MTN says the industry consensus is that 5G will double to triple energy consumption for mobile operators, once networks scale. Warnings of more power consumption are coming from some Chinese operators that are leading the world in 5G deployments.
