**Independent energy storage on
the power supply side**

Overview

Do energy storage systems ensure a safe and stable energy supply?

As a consequence, to guarantee a safe and stable energy supply, faster and larger energy availability in the system is needed. This survey paper aims at providing an overview of the role of energy storage systems (ESS) to ensure the energy supply in future energy grids.

Why do we need energy storage systems?

As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

Can energy storage solutions address grid challenges using a 'system-component-system' approach?

Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers. This survey paper offers an overview on potential energy storage solutions for addressing grid challenges following a "system-component-system" approach.

Why do energy storage systems need a DC connection?

DC connection The majority of energy storage systems are based on DC systems (e.g., batteries, supercapacitors, fuel cells). For this reason, connecting in parallel at DC level more storage technologies allows to save an AC/DC conversion stage, and thus improve the system efficiency and reduce costs.

What is long-term energy storage (LDEs)?

One of the major concern is to supply power during periods where both solar and wind power are not available. Long-term storage (i.e., with a discharge time at nominal power more than 10 h) plays a vital role. Long Duration

Energy Storage (LDES) solutions can be divided in two categories .

What is a supercapacitor energy storage system?

A 400 kW, 1.0 kWh supercapacitor energy storage system that aims at improving the power quality in the electrical grid, both in steady state (e.g., harmonic compensation) and during transients (e.g., fault-ride through). A 100 kW, 200 kWh battery energy storage system, that is based on distributed MMC architecture.
