Why should you use a solar charger?

A solar charger is often best used to charge up portable power devices (power banks) rather than the electronic gadget directly. Being low in the sky also increases the chances of the sun striking ground-based objects (trees, hills, etc.) and causing longer shadows.

Can a solar panel charge a portable battery?

Yes, a solar panel can charge a portable power bank. The photovoltaic (PV) cells on solar panels absorb energy from sunlight and convert it into electricity, which can then be used to charge devices directly or portable power banks.

What type of solar charger is best for personal devices?

For personal devices, small/on-device solar chargers are a good option. Some personal devices have small, built-in basic solar panels intended to charge the device they are built into, such as a lantern or power bank. These typically need full sunlight to function well. It can take days of direct sunlight to fully charge via this style of panel.

What can you use a portable power device for?

Portable power devices (also known as power banks or stations, battery packs, portable chargers or battery storage units) house internal rechargeable batteries that allow you to juice up your gadgets on the go.

Should I pack a solar charger?

Backpacking in open country can be suitable for using a solar charger if you can orient the panel to face the sun. However, if you are hiking under a deep forest canopy or through a shadowy canyon, there is not much point in strapping a solar charger to your pack.

Why should you buy a portable power station?

Bring big backup power with you with these expert-recommended portable power stations, which can store enough power to charge electronics, appliances, and more.
