Japanese energy storage battery customization company

Overview

Why should you invest in Japan's battery storage sector?

Global market relevance is underscored by Japan's position as a leader in advanced battery manufacturing, particularly in lithium-ion technologies. As the world moves toward electrification and renewable energy sources, Japan's battery storage sector is poised for significant growth, making it an attractive area for investment and research.

What factors influence the battery storage industry in Japan?

The Battery Storage industry in Japan is influenced by several key factors. Firstly, the regulatory environment is crucial, as government policies promote renewable energy integration and energy storage solutions. The Feed-in Tariff (FiT) and Feed-in Premium (FiP) schemes encourage investments in battery storage technologies.

Can Eku energy commercialise large-scale batteries in Japan?

For Eku Energy, the LTDA is important to the business model of its Japanese projects but the developer, perhaps best known for projects in the UK and Australia, sees three pathways to commercialisation for large-scale batteries in Japan. The company secured a 20-year tolling agreement for its first Japan project, the 30MW/120MWh Hirohara BESS.

How is Japan's energy storage landscape changing?

Japan's energy storage landscape is shifting, pushed by household demand, corporate ESG mandates, and domestic battery manufacturing. The residential lithium-ion market, projected to grow at a CAGR of 33.9% through 2030, remains one of the fastest-expanding segments.

How big is Japan's battery storage market?

In the commercial space, Japan's battery storage market was valued at USD 593.2 million in 2023 and is projected to reach USD 4.15 billion by 2030. While

commercial installations currently dominate revenues, industrial adoption is expected to scale faster. Utility-scale storage is also gaining ground.

What is Japan's first energy storage project?

In 2015, we started Japan's first demonstration project covering energy storage connected to the power grid in the Koshikishima, Satsumasendai City, Kagoshima. This project is still operating in a stable manner today. One feature of our grid energy storage system is that it utilizes reused batteries from EVs.
