

## A-Core Container

# Liberia Energy Battery Storage Power Station

## Overview

---

How does Liberia import electricity?

3.2. Imported electricity Liberia imports electricity from neighboring Côte d'Ivoire and Guinea through the West African Power Pool (WAPP) interconnection , which involved 650 km of 225 kV transmission lines , with a transit capacity of  $\leq 290$  MW – making it the largest source of imported electricity for the country in 2020.

What is the installed power capacity of Liberia?

Recently, Liberia's installed electricity capacity reached ~200 MW. Most of this capacity comes from HFO and diesel power plants, with limited contributions from hydroelectric and biomass sources . Fig. 2 provides an overview of the installed capacity trend available as an alternative to the grid-based approach and the needs they meet. Fig. 2.

Will Liberia get a 20 MW power supply in 2020?

In addition, the government signed a Power Purchase Agreement with a solar energy company to provide the country  $\geq 20$  MW of electricity in 2020 . Despite these efforts, much work remains to be done to improve access to reliable and affordable energy in Liberia.

How can Liberia improve energy security?

One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation. By harnessing these indigenous and sustainable energy resources, Liberia can decrease its reliance on imported fuels and enhance its energy security.

What are the main energy sources in Liberia?

The primary energy sources in Liberia are traditional biomass fuels such as firewood and charcoal, which account for more than 80 % of the country's

total energy consumption [5, 12, 13]. Petroleum products, including gasoline and diesel, account for about 10 % of energy consumption, while hydroelectric power accounts for just over 6 % .

How can Liberia reduce its dependency on imported fuels?

To overcome these challenges, Liberia has been exploring alternative solutions to reduce its dependency on imported fuels for thermal power generation. One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation.
