Research demonstrates the energy-efficiency benefits of hybrid power systems combining supercapacitors and lithium-ion batteries. Energy storage is evolving rapidly, with an increasing focus on enhancing efficiency and longevity in various high-power applications. Two fundamental components are.

The ultra-long life battery being used in this project employs lithium-ion cycle supplement technology, which can extend the cycle of the energy storage battery cell to up to 10,000 times, and the battery life can exceed 15 years. This is the first electrochemical energy storage project in Shandong.

Finally, we conducted the simulation, which is based on simulink software, comparing the SOC of supercapacitor and lithium battery, current and voltage analysis, as well as the simulation of hybrid energy storage system at different speeds of the car. 1. Introduction With the increasing excessive.
