Malawi solar energy storage battery company

Overview

The Global Energy Alliance for People and Planet (GEAPP), in partnership with Malawi's government and ESCOM, has launched a \$20 million project to build the country's first Battery Energy Storage System (BESS) in Lilongwe. What are some solar energy developments in Malawi?

In Malawi, solar energy developments are helping local communities maintain sustainable energy. For instance, Bwengu Projects Malawi provides teachers in high-needs schools with solar-powered LED projectors in Bwengu, the northern countryside of Malawi.

How can Malawi achieve a cleaner energy future?

The project will also contribute to a cleaner energy future for Malawi, reducing reliance on costly diesel generators, cutting carbon emissions by ~10,000 tonnes annually, and unlocking the full uptake of at least 100 MW of variable renewable energy, such as solar and wind power, into the grid.

What is the Malawi Bess project?

The Malawi BESS project will guide the scale-up of BESS projects in the Consortium's participating countries. To alleviate energy poverty by 2030 and save a gigaton of CO₂ in low and middle-income countries, it is estimated that 90 GW of BESS must be developed to support the required 400 GW of renewable energy.

Is Malawi a proof point for geapp's Bess project?

By breaking ground for this BESS project (and its subsequent completion expected in 2025), Malawi is an important proof point for the BESS Consortium launched by GEAPP at COP28 to secure 5 gigawatts (GW) of BESS commitments in low and middle income countries (LMICs) by the end of 2024.

How can collaboration improve the resilience of Malawi's grid?

By enhancing the stability and resilience of Malawi's grid, it demonstrates the

power of collaboration in advancing energy access, reducing emissions, and supporting livelihoods.
