# Micronesia Communications BESS Power Station Model

## Overview

---

Why did the Micronesian government seek out PV & Bess?

The Micronesian government sought out PV and BESS for a grid-tied solution to support (PCU) Micronesia's power supplier. Installation of BESS supported power infrastructure at two locations:.

What is Bess ion & energy and assets monitoring?

ion – and energy and assets monitoring – for a utility-scale battery energy storage system BESS). It is intended to be used together with additional relevant documents provided in this package. The main goal is to support BESS system designers by showing an example desi.

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

Why should you choose a Bess energy storage system?

The mobility and flexibility of the system enables novel applications and deployments where BESS previously were unused due to the non-flexible solutions. The system is modular, meaning that the energy storage capacity can be quickly adapted depending on the application case, in contrast to larger and bulkier solutions.

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

What are the environmental conditions of a mobile Bess system?

Due to the flexible and mobile nature of mobile BESS, the environmental conditions can differ greatly for each system depending on the respective mobile deployments. Ranging from high temperatures and high humidity to the inverse during the same season, monitoring and control of the TMS is critical.
