Morocco mobile energy storage vehicle manufacturing price

Overview

How will Morocco become a green mobility manufacturing giant?

The key to Morocco's rise as a green mobility manufacturing giant will be expanding its automotive ecosystem to include local manufacture of Li-ion batteries, which represent 30% to 40% of the cost of the average EV. The new gigafactory could thus accommodate producing the targeted additional 300,000 vehicles as EVs.

Will Morocco's Gigafactory produce EV batteries?

While Mezzour has been vague about the number of lines and total capacity of the proposed Moroccan facility, Tesla's successful \$2 billion gigafactory in Shanghai, China, was originally intended to produce 500,000 EV batteries per year. It is possible that the output of Morocco's gigafactory will be of a comparable order of magnitude.

Why is Morocco a global EV manufacturing hub?

A development of enormous significance for the kingdom, Morocco's rise as a global-scale, EV manufacturing hub is as critical to Western supply chain resilience as it is to promoting carbon-free mobility to combat climate change.

Will Morocco become a green mobility leader in the Middle East?

Rabat's recent announcement that it would soon sign an agreement for the construction of a "gigafactory" to make electric vehicle (EV) batteries has placed Morocco in pole position to become a green mobility leader in the Middle East and North Africa.

Can Morocco drive a green mobility Revolution?

Now, Morocco's reserves of critical battery minerals are accelerating its entrance into EV manufacturing. With ample solar and wind energy resources along with utility-scale infrastructure already in place to utilize them, Morocco

has the potential to drive a green mobility revolution by powering the production of EVs using renewable energy.

Will Morocco increase EV production by 2025?

Now Rabat is aiming to increase Morocco's output to 1 million vehicles per year by 2025, with many of those being EVs. Already in November 2021, Morocco's public finance bill for 2022 proposed a reduction of the import duty on lithium-ion cells from 40% to 17.5% to promote the local assembly of Li-ion batteries using cells imported from East Asia.
