## Overview

---

Tesla will invest approximately \$194 million in facility upgrades and manufacturing equipment, with \$44 million earmarked for building improvements and \$150 million for Tesla's specialized Megapack production equipment.

Tesla will invest approximately \$194 million in facility upgrades and manufacturing equipment, with \$44 million earmarked for building improvements and \$150 million for Tesla's specialized Megapack production equipment.

Today there are about 34 battery factories either planned, under construction, or operational in the country. Former U.S. President Joe Biden's Inflation Reduction Act (IRA), signed into law August 16, 2022, might not have been the initial catalyst behind the onshoring battery factory trend. But it.

Our state-of-the-art lithium iron phosphate (LFP) battery cell production equipment is already operational, producing C-sample cells at our equipment supplier location off-site. Having this work done and team members trained in parallel speeds up the commissioning process once the equipment arrives.

These laws have leveraged billions of dollars in government support to drive private sector investments in clean energy supply chains across the country. For several years, one of us, Jay Turner, and his students at Wellesley College have been tracking clean energy investments in the U.S. and.

It's against this backdrop that the American Clean Power Association made a stunning announcement today: U.S. energy storage manufacturers and developers are committing \$100 billion over the next five years to establish a fully domestic battery supply chain, a move that could fundamentally reshape.

Fast forward to today, and there are 32 battery factories either planned, under construction, or already operational across the country. Government policies have played a crucial role in shaping this transformation. While earlier initiatives laid the groundwork, recent laws have provided a.

Tesla is setting up shop in Texas with a massive new Megapack factory that could dramatically scale its energy storage business. Plans to repurpose an existing 1.6 million square foot facility in Waller County, allowing for a significantly faster production timeline than building from scratch.
