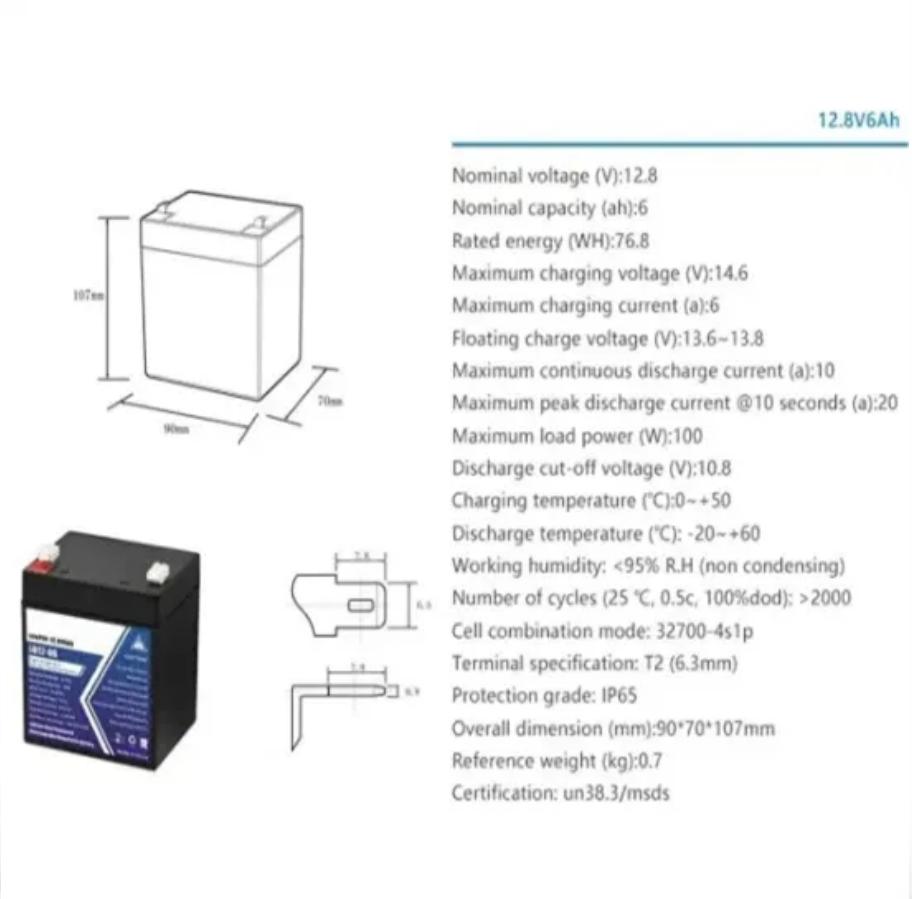
Price of Phase Change Energy Storage System in the Middle East



Overview

This report analyses the cost of utility-scale lithium-ion battery energy storage systems (BESS) within the Middle East utility-scale energy storage segment, providing a 10-year price forecast by both system and component.

This report analyses the cost of utility-scale lithium-ion battery energy storage systems (BESS) within the Middle East utility-scale energy storage segment, providing a 10-year price forecast by both system and component.

This report analyses the cost of utility-scale lithium-ion battery energy storage systems (BESS) within the Middle East utility-scale energy storage segment, providing a 10-year price forecast by both system and component. Lithium iron phosphate (LFP) batteries are the focus of the report.

In a recent chat with pv magazine, Yasser Zaidan, senior sales manager for the Middle East at JinkoSolar, described the trajectory of the large-scale storage business in the main markets of the Middle East. Saudi Arabia's large scale energy storage market is expected to developed at an.

The MEA Battery Energy Storage System Market report segments the industry into Technology (Li-Ion Battery, Lead Acid Battery, Others), Application (Residential, Commercial and Industrial, Utility), and Geography (United Arab Emirates, Saudi Arabia, South Africa, Egypt, Rest of Middle-East and.

The NEOM Green Hydrogen project, which aims to be powered by 100% renewables, is under construction and is already deploying a BESS 536 MW / 600 MWh facility supplied by Sungrow. Saudi Arabia is also developing several landmark tourist complexes, where multi-utility contracts encompassing wind, PV.

The Middle East battery energy storage systems market size was estimated at USD 0.66 billion in 2024 and is projected to reach USD 2.60 billion, growing at a CAGR of 14.7% from 2025 to 2033. Battery storage is emerging as a critical enabler of the region’s renewable energy transition, ensuring.

wind speeds drop, electricity can no longer be generated. If renewables are to

represent a viable alternative to conventional energy sources, then it is necessary to develop ways to store excess electricity generated when supply outstrips d of lower daytime generation when cloud cover is heavier.Why are batteries becoming a preferred energy storage solution in the Middle East?

In the Middle East and African region, the demand for batteries has increased in the Middle East as a preferred energy storage solution primarily due to technological innovation and the reduction of battery costs.

Which energy storage technology has the most installed capacity in MENA?

Pumped hydro storage (PHS) has the largest share of installed capacity in MENA at 55%, as compared to a global share of 90%. Pumped hydro storage is one of the oldest energy storage technologies, which explains its dominance in the global ESS market.

Is the MENA region a good place to invest in battery energy?

The MENA region is starting to witness a drastic increase in large-scale battery energy storage systems (“BESS”) projects, accompanying a soaring penetration of renewable energy. This has happened at a pace, which seems to have surprised many market analysts. In the past, forecasts for the MENA region showed a few GWh for the coming years at best.

Will energy storage expand in MENA?

The current utility business model limits the prospects of energy storage expansion opportunities, unless driven by direct governmental support. Auctions in MENA have been a major driver for renewable energy deployment, most notably for solar and wind, but only a few have included energy storage.

What is energy storage system deployment in MENA?

Energy Storage System deployment in MENA Energy Storage Systems (ESS) play a critical role in the integration of VRE into the power grid, as these systems manage the intermittencies of renewable energy resources and mitigate potential power supply disruptions.

Which energy storage solutions will be the leading energy storage solution in MENA?

Electrochemical storage (batteries) will be the leading energy storage solution in MENA in the short to medium terms, led by sodium-sulfur (NaS) and lithium-

ion (Li-Ion) batteries.
