Price of dual-crystal solar panels

Overview

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type.

Installing solar panels can be one of the most impactful improvements you can make - allowing you to take control of electricity bills, protect your home from outages and increase the value of your property while producing energy directly on the roof. How much does it cost to install and manage.

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

Consider solar panels if you have a high utility bill, get lots of sun and qualify for tax breaks or other savings. Some or all of the mortgage lenders featured on our site are advertising partners of NerdWallet, but this does not influence our evaluations, lender star ratings or the order in which.

Solar panel costs refer to the price or expense associated with the acquisition

and installation of solar photovoltaic (PV) systems and encompass a wide range of financial considerations. By definition, a solar panel, which converts sunlight into electricity using photovoltaic (PV) cells, is a. How much does a monocrystalline solar system cost?

Monocrystalline panels are highly energy efficient and, as such, cost the most at \$1 to \$1.50 per watt. Outfitting a 6 kW solar system costs \$6,000 to \$9,000. Polycrystalline panels cost \$0.90 to \$1 per watt. You can tell them apart from other panels because they're blue.

How much do polycrystalline solar panels cost?

Polycrystalline solar panels are made by forming silicon crystal fragments into a solar panel shape. On average, you can expect to pay \$.90 to \$1.50 per panel, before installation and additional solar elements. The cost to add solar panels to an average U.S. home is around \$4,500 to \$7,500.

How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

How much does a CPV solar system cost?

Concentrated photovoltaic (CPV) panels are \$0.80 to \$1.10 per watt. While not as well-known as other types of panels, CPV panels are highly efficient and may grow in popularity. A 6 kW solar system would cost \$4,800 to \$6,600. A single solar cell costs about \$0.30 and most panels use 60 or 72 cells. The more cells in a panel, the higher the cost.

How much does a home solar system cost?

In 2025, we surveyed 1,000 home solar customers across the U.S. to understand their experience shopping for and installing solar panel systems. Most homeowners said they paid around \$16,129 for a solar panel system, with an average of 14 solar panels installed.

Are solar panels expensive?

No, solar panels in the USA are not considered expensive. On average, a 6.6

kW solar panel system typically costs around \$16,000, not considering government incentives and rebates. Solar panel costs in the US usually range from \$4,500 to \$36,000, or \$1.00-\$3.60 per watt (W).
