Qatar Liquid Cooling Energy Storage Operation Company

Overview

Who owns Qatar cool?

Qatar Cool is the leading district cooling company in Qatar, with The United Development Company (UDC) as the majority shareholder. Since its inception in 2003, Qatar Cool has aimed for operational excellence in every aspect of its business.

Does Qatar have a cooling system?

Yes, all eight World Cup stadiums in Qatar have cooling systems. Although they don't all operate as conventional air-conditioning systems.

Why should you choose Qatar cool?

Ensuring the lifecycle is kept in motion, where possible. District cooling by design reduces GHG's and pollution, further efforts are made by Qatar Cool, such as the green vertical garden on the newest cooling plant, building our cooling plants to LEED certified standards and actively reducing habits and functions to reduce the impact, companywide.

Does Qatar cool use potable water?

Qatar Cool continues to integrate additional water conservation into operations. The overall energy efficiency is calculated based on the total energy consumed by our customers divided by the energy used in our production process. During 2013 to 2015, P1 and P2 were still utilizing potable water.

Who is Qatar cool?

Since its inception in 2003, Qatar Cool has aimed for operational excellence in every aspect of its business. Over the past 21 years, the company has developed solid technical and operational experience and has refined its approach on both business-to-business (B2B) and business-to-consumer (B2C) fronts.

Why is Qatar cool positioned for regional expansion?

Balance sheet flexibility, access to capital and regional know-how make Qatar Cool well positioned for regional expansion in nearby markets where district cooling is set to play an important societal role.
