# Somaliland s new outdoor power supply

## Overview

---

With frequent power outages and limited grid infrastructure, Somaliland's reliance on diesel generators is both costly and environmentally unsustainable. Outdoor power supply BESS offers a scalable alternative, particularly when paired with renewable energy sources like solar.

With frequent power outages and limited grid infrastructure, Somaliland's reliance on diesel generators is both costly and environmentally unsustainable. Outdoor power supply BESS offers a scalable alternative, particularly when paired with renewable energy sources like solar.

The Minister of Energy and Minerals, Eng. Ahmed Jama Barre, in a press conference held at the ministry headquarters, outlined the ministry's achievements during the first 100 days in his new portfolio and shared future plans for the ministry. Eng. Ahmed Jama Barre began by providing a detailed.

As Somaliland continues to address energy challenges, Battery Energy Storage Systems (BESS) have emerged as a game-changer for reliable outdoor power solutions. This article explores the cost dynamics, applications, and market trends of BESS in Somaliland, providing actionable insights for.

The electricity sector in Somaliland currently boasts a total generation capacity of 165 MW. The price of electricity is set at 0.73 USD per kilowatt-hour (kWh). This high cost reduces energy consumption among households and light industries, as many residents and businesses struggle to afford such.

Somaliland's main port, at the city of Berbera, accounted for two-thirds of the country's revenues in 2020. Over the years, these revenues have mostly gone into the central state coffers, while the development of Berbera has been neglected. When we visited the city for our research project on port.

The ESPs 'mini-grids typically operate is landed (the many ESPs are not interconnected and every one manages their own small electrical distribution network). The diesel generators often operate at low-efficiency, part-load conditions due to the changing electrical demand coupled with low local.

Somaliland's current electricity production is limited, decentralized, and heavily reliant on imported diesel fuel. Estimates vary, but the total installed capacity across Somaliland hovers around 60 to 80 megawatts (MW) —a tiny fraction of what the population actually needs. To put this into.
