Temperature and humidity of container energy storage system

Overview

In this study, temperature and humidity monitoring and management issues were addressed for a container-type ESS by building sensor-based monitoring and control systems. Furthermore, a rule-based air conditioner control algorithm was proposed for temperature and humidity management.

Battery Energy Storage Systems (BESS) are complex systems that require precise monitoring to ensure they operate safely and efficiently. Sensors play a crucial role in this monitoring, providing real-time information about the system's status and environment. In a BESS container, different types of

The application provides a temperature and humidity regulating system for an energy storage container, which comprises: the energy storage container is internally provided with a battery cluster; the liquid cooling unit is arranged on the outer wall of the energy storage container, is communicated.

The project features a 2.5MW/5MWh energy storage system with a non-walk-in design which facilitates equipment installation and maintenance, while ensuring long-term safe and reliable operation of the entire storage system. The energy storage system supports functions such as grid peak shaving.
