The industrial prospects of solar and energy storage

Overview

Will the residential solar market grow in 2025?

In our base case forecast, we project that the residential solar market will grow by 3% on average annually from 2025 to 2030. States with higher retail rates and larger TPO markets will fare better over the next few years. Details on the low case forecast, which assumes fewer TPO project qualifications after 2027, can be found in the full report.

What are the challenges faced by energy storage technologies?

Challenges include high costs, material scarcity, and environmental impact. A multidisciplinary approach with global collaboration is essential. Energy storage technologies, which are based on natural principles and developed via rigorous academic study, are essential for sustainable energy solutions.

Why is the residential solar market struggling?

The residential solar market has struggled over the past few years, primarily due to sustained high interest rates. Consumer demand took a further hit in Q2 due to tariff and economic uncertainty, the whiplash of various OBBBA drafts, and two more bankruptcies of major financiers.

What are the applications of energy storage materials?

The diverse applications of energy storage materials have been instrumental in driving significant advancements in renewable energy, transportation, and technology [38, 39]. To ensure grid stability and reliability, renewable energy storage makes it possible to incorporate intermittent sources like wind and solar [40, 41].

Which research materials demonstrate the progress in energy and storage technologies?

A few recent applicable research materials in Table 5 demonstrate the ongoing progress in energy and storage technologies through creative

research, namely in HEDM compactness. Table 6 shows the performance evaluation which describes carbon-based nano nanoelectrode materials application and energy storage. Table 5.

How has the solar market changed over the past year?

Many installers report a rocky start to the year. In H1 2025, capacity decreased year-over-year in 33 states, resulting in a 12% contraction compared with H1 2024. The residential solar market has struggled over the past few years, primarily due to sustained high interest rates.
