Waisha Communication Base Station Inverter

Overview

What is the new base station architecture offered by integrated transceivers?

The new base station architecture offered by these transceivers allows base station designers more choices and ways to differentiate their product. The family of integrated transceivers discussed in this article are the industry's first to support all existing cellular standards, 2G to 5G, and cover the full sub-6 GHz tuning range.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

What is a base station transceiver?

These transceivers allow base station designers to adopt a single, compact radio design across all band and power variants. First, let's review several base station classes. The well-known standards body 3GPP has several defined base station classes.
