# What is a single battery in an energy storage project

## Overview

---

A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of technology that uses a group of batteries in the grid to store electrical energy. Battery storage is the fastest responding dispatchable, and it is used to stabilise those grids, as battery storage can transition from one state to another.

### Breaking Down the Buzzword: What Exactly Is It?

A single energy storage battery is like a Swiss Army knife for electricity – it stores energy from solar panels, grid power, or even your hamster wheel (okay, maybe not the last one) and releases it when needed.

Meet the single energy storage battery – the unsung hero of modern energy solutions. In 2023 alone, the global market for these compact powerhouses grew by 62%, proving they're not just a flash in the pan. Breaking Down the Buzzword: What Exactly Is It?

Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions. While BESS technology is designed to bolster grid reliability, lithium battery fires at some.
